TRUESHOT CHALK MARKER KIT

With its simple point-and-spray action, the TRUESHOT delivers effortless, one-handed marking anywhere, even in confined or hard-to-reach spaces. Featuring a deep-hole reach of 0-100mm, it excels where traditional markers struggle, leaving a bold, bright green chalk mark visible on both light, dark and uneven surfaces.

Engineered for performance and sustainability, TRUESHOT features a rugged, closed-body design with replaceable, recyclable canisters that keep you working longer while cutting down on waste. Unlike disposable alternatives, TRUESHOT is built to perform better, save money, and reduce environmental impact, making it the smarter choice for pros.

FEATURES INCLUDE:

- Easy use, just point and spray - more convenient than a traditional marker in hard to reach or confined spaces, or where you only have one hand free.
- High-Visibility - The bright green chalk is very easy to see on almost all surfaces, light and dark.
- Works on most surfaces - Even if the surface is rough or uneven, for example, pebbledash.
- Optimised performance - only need one version of the product for most applications.
- Trade focused features - pocket clip, lanyard hole, closed body design, 3-stage button (lock, spray, replace)
- Durability - the TRACER TRUESHOT canister is protected, unlike competitive products which can be easily damaged or pierced by sharp objects in a tool bag.
- Replaceable canisters - endlessly reuseable, competitors have a set lifespan due to needing to throw them away once empty.
- Environmental - canisters can be recycled in line with local laws, meaning less markers in landfill.
